Town of Breckenridge

BACKGROUND

The Town of Breckenridge achieves its 100% renewable electricity for municipal facilities with a community solar subscription from Pivot Energy. This partnership allows the town to achieve its municipal renewable electricity goal five years ahead of schedule, raising the expectation and urgency for climate action for other cities and towns across Colorado.

IMPACT

"The Town of Breckenridge is thrilled to be ahead of schedule for our 100% renewable energy municipal goal. Three years ago, we weren't sure how we would get there or if we could even do it. Now, we're showing other communities the way forward. We hope to be a leader in this space as we continue to reduce our energy needs across the community, such as moving towards all new construction being net zero. Pivot has been a critical partner in this process, and we are grateful to have alignment in our vision and goals, which has made this process infinitely easier."

- Mayor of Breckenridge, Eric Mamula.
